Post-Treatment Instructions Following PRP (Platelet Rich Plasma)

1. You will likely experience mild to moderate swelling of the treated area, this will last for about 12- 24 hours; ice or cold compresses can be applied to reduce swelling if required. You may notice a tingling sensation while the cells are being activated. In rare cases skin infection may occur, which is easily treated with an anti-biotic.
2. After your PRP treatment you may continue your normal hair care routine as usual.
3. Follow-up is generally done at three months and again at six months as needed. The benefits of PRP are not immediate and a series of 3 treatments is strongly recommended with maintenance treatments every 6-12 months. Optimal results are typically seen 3-6 months after your third treatment.
4. Please contact us at 910-256-4350 or email us at office@wilmingtondermatologycenter.com if you experience excess pain, swelling, or if you have any questions or concerns at all.
